

Today's Featured Activity: Let's Go Fly A Kite!

With the nice weather and some breezy days, why not take to the sky? While there are lots of fancy kites you can buy, making your own using materials you likely already have around the house is a fun way to learn about how a kite works! Here are some sample designs and tutorials. Go fly a kite!

- Ever wonder how a kite stays up in the air? This [video](#) gives a quick overview, and a design for making your own!
- The [Tiny Tetrahedral Kite](#) requires nothing more than a few sheets of paper, tape, and some string.
- This [mini kite tutorial](#) is great because it doesn't really need too much wind to fly!
- This is a [super easy kite tutorial](#) that really flies!
- What if you can't get outside, or the weather just isn't great kite flying weather? Try this [paper plate kite](#) idea, it's great for smaller kids, or "flying" a

kite indoors!

Kites are often shaped like things you see in nature like butterflies and birds. When you're out flying your kite do you notice any animals or insects also soaring around?
